

Heimdal™ – iPhone & iPod touch Application

The new Heimdal application for Apple iPhone and iPod touch allows users access to systems controls and monitoring information for systems built with *Utgard, Sif, Kari, Thor* or the *Sunna* products from Lauritzen Inc. The use of the iPhone or iPod touch creates another dimension in controlling and monitoring trackers and other systems while in the field. Local Wi-Fi access enables the iPhone or iPod touch to discover and communicate with solar trackers, solar thermal and wind systems. The portable devices leverage the *Valhalla* server to gather and display the relevant information. The iPhone and iPod touch software will be available as a free download to users.

Features

- Monitor wind, solar hot water or solar PV systems
- Control tracking systems as well as pumps and relays for solar hot water
- Works anywhere a wireless network connection is present
- Provides information for users who want to know what their systems are doing anywhere, at any time
